WORK EXPERIENCE

Senior Backend Developer

KHODRO45

12/2025 - Present

Tehran

Achievements/Tasks

- Architected and implemented an offline finance dispute-detection system for payment and cash-out workflows, introducing idempotency controls that reduced finance dispute incidents and duplicate payments by **90%**.
- Designed and developed a centralized vehicle and document delivery management system, replacing manual Excel-based operations with an automated and scalable workflow solution.
- Implemented database-level encryption for sensitive customer information, including national identification and banking data, improving platform security and protecting user financial records.
- Led technical ownership of two independent business funnels, driving system architecture, service design, code reviews, and engineering best practices across multiple teams.
- Refactored and optimized the contract management service to resolve concurrency-related issues, reducing workflow errors by **70%** and improving system reliability and maintainability.
- Redesigned data models and service interactions to reduce unnecessary database lookups, improve loose coupling, and enhance overall backend performance and scalability.

Backend Developer

TOMAN

11/2023 - 12/2025

Tehran

Toman aims to provide integrated financial solutions for businesses with emphasis on reliability.

Achievements/Tasks

- Engineered** and deployed critical financial solutions, including **IPG payment refunds** and **Wallet functionality**, while collaborating across four different B2C and B2B teams. **Played the main role** in resolving **five major system-wide disasters**.
- Spearheaded** performance optimization for a critical, complex query, **reducing memory usage** from **32MB to 68KB** and **execution time** from **1.8 seconds to 0.013 seconds** by leveraging **database aggregation** over a less efficient Python approach.
- As a **core member** of the Reconciliation Team, **developed** and **implemented** a new logic framework to track company-wide transfers and match them with bank statements, achieving a **99.8% matching success rate** across **six distinct matching strategies**.

OPEN SOURCE PROJECTS

UUID (Vahid Unique Identifier)

The **UUID** is a Python package designed to generate Vahid unique identifiers (UUIDs) based on a custom epoch time and a base-62 encoding scheme.

FastCrawler (06/2023 - 11/2023)

Team member of the FastCrawler framework — an easy-to-use Python framework with scheduler, UI, and CLI features for creating crawling spiders.

PicDicer (2018)

Redrawing given pictures using a very vast amount of dices with Python, Qt, and Pillow.

AWARDS

Python and CEH Workshops (2017)

Award for teaching Python (18Hrs) and CEH (22Hrs) workshops, Islamic Azad University of NajafAbad.

Network Workshop (2016)

Award for teaching CCNA workshops (20Hrs), Islamic Azad University of NajafAbad.

Backend Developer

BERNETCO

01/2023 - 11/2023

Remote

Bernet is a company that's trying to effectively monitor the software development process.

Achievements/Tasks

- Developed a Django admin project featuring interactive maps and charts, and optimized report response time by **70%** using aggregation tables.
- Created a comprehensive Agile-based task and time management program, including task workflows, time entries, Git workflow integration, and various charts implemented using Elasticsearch.
- Designed and implemented two projects in health and delivery topics.

Contact: bernetco.ir

Software and Junior DevOps Engineer

PLASCO

09/2021 - 01/2023

Remote

Automated management of Health and Safety Executive (HSE), focused on anomaly detection and related workflows.

Achievements/Tasks

- Refactored codebase to enhance SOLID principles and improve coupling and cohesion. Transitioned development process to Test-Driven Development (TDD).
- Dockerized, implemented GitHub CI/CD, TLS, HAProxy, etc.
- Redesigned database architecture, normalized tables, and improved query time execution by **30%**.
- Deployed solutions across **8+** petrochemical companies.

Backend Developer

SNAPP CARFIX

04/2020 - 04/2021

Isfahan

SnappCarFix is an online platform for **car parts and services**, backed by **Snapp** (an Uber clone).

Achievements/Tasks

- Developed and delivered APIs for Agents, ServiceCenters, and Store apps with Python, Django, DRF, RabbitMQ, Celery, and PostgreSQL.
- Created Agents app, made data gathering **80%** faster and completely paperless.
